Research Interest

I am a fourth-year Ph.D. candidate at Michigan State University, advised by Professor Jiliang Tang, and I am on the job market for positions starting in 2027. My research builds **personalized, proactive, and safe agents** with **multimodal capabilities** that interact with people. I work on three fronts: the **agent harness** (memory, retrieval, and self-improvement) that determines what an agent can actually do, **post-training** that makes it better, and **evaluation and environments** that reveal where agents fail. I have published 35+ papers at NeurIPS, ICML, ICLR, ACL, EMNLP, NAACL, KDD, and CVPR, received the Best Paper Award of IEEE Transactions on Cloud Computing (2023) and an ACL-2026 SAC Highlight (top 1%, Best Paper Candidate), and have industry research experience at Meta AI, Amazon, and Baidu.

Education

Michigan State University, East Lansing, USA Sept. 2023 – Present
Ph.D. Candidate in Computer Science and Engineering

- Advisor: Dr. Jiliang Tang | Lab: Data Science and Engineering (DSE) Lab
- Expected Graduation: **May 2027**
- Research Focus: Agentic AI, Retrieval & Memory, Personalized LLMs, Agent Safety & Privacy, Multimodal

University of Electronic Science and Technology of China, Chengdu, China Sept. 2019 – Jun. 2023
B.Sc. in Computer Science and Engineering, Yingcai Honor School

- CGPA 3.98/4.00; Weighted Average 93.97/100 (**1st among 100 students**)

Honors and Awards

- **SAC Highlight (Top 1%) & Best Paper Candidate**, ACL-2026 2026
- **Best Paper Award**, IEEE Transactions on Cloud Computing (JCR Q1) 2023
- **The Most Outstanding Students Award**, UESTC (highest honor; 10 students university-wide)
- **National Scholarship** (highest undergraduate honor in China) 2020
- WAC Scholarship (10 undergraduates university-wide per year), UESTC 2021
- 1st Outstanding Academic Scholarship (Top 5%), UESTC 2020, 2021, 2022

Industry Experience

*All papers in this section are **first-authored** (including co-first).*

Meta AI, Seattle, USA Summer 2026
Research Scientist Intern, Next Generation Proactive Agents
Mentored by Xiao Yang, Luna Dong, and Scott Yih
Closely worked with a cross-organizational team spanning Superintelligence Labs, Reality Labs, FAIR, and MRS

I built **memory-driven proactive agents**: assistants that can proactively use their context and decide *whether and when* to speak, not just what to answer. I introduced **MemoProBench**, a benchmark for memory-driven proactive assistance (MPA) pairing egocentric video with year-long, distractor-rich personal memories (∼**618K tokens** each) and scoring content and timing jointly, and found **existing models severely limited** in this

regime. I then built **MemoProAgent**, whose plug-and-play harness surfaces memory from a graph-organized store and gates it down to what is worth interrupting for, lifting strict accuracy from **less than 10%** to **37.5%** (Qwen3.8-27B) and to **38%** on GPT-5.3-Chat with no training at all, reaching **42.4%** with **RL post-training**.

▷ MemoProAgent: Toward Memory-Driven Proactive Assistance **[Submitted to ICLR'27]**.

Amazon, Search & Shopping Foundation Model Team, CA, USA Summer 2024, 2025
Applied Scientist Intern, Retrieval-Augmented Generation and Personalization
Mentors: Tianqi Zheng, Dante Everaert | Managers: Hanqing Lu, Chuan Tian, Monica Xiao Cheng

My work centered on two sides of making retrieval-augmented and personalized LLMs deployable. **On the model side** (how a system uses the context it retrieves): attention-guided compression cuts personalization context **50**× (10K→200 tokens) at near-full-context quality [ACL'26]; gated representation fine-tuning buys **+26–35 points** of context robustness while tuning only **0.0004% of parameters on fewer than 200 examples** [ACL'25]; and representation-based knowledge checking filters misleading evidence at **95% accuracy** [NAACL'25]. **On the data side** (what the retrieval corpus itself exposes): **self-improving synthetic data** replaces private records at comparable task quality [EMNLP'25], and I gave the first account of how **multimodal RAG leaks** the images and text it retrieves [EMNLP'25]. Invited back for a second summer.

▷ Efficient Personalized LLMs (PLLMs) [ACL'26, Oral, Best Paper Candidate, SAC Highlight].
▷ Knowledge Checking in RAG [NAACL'25, Oral].
▷ Representation Finetuning for Robust RAG [ACL'25].
▷ Self-Improving Synthetic Data for RAG [EMNLP'25].
▷ Multi-modal RAG [EMNLP'25].

Baidu Inc., Search & Agent Business Team, Beijing, China May 2023 – May 2024
Research Intern, RAG Privacy and LLM Memorization
Mentors: Dr. Yiding Liu, Dr. Dawei Yin

I established the privacy foundations of retrieval-augmented generation: the **first work to reveal that retrieval-augmented systems carry severe privacy risk**, leaking their own retrieval database [ACL'24]. The threat model it introduced has since been carried into the privacy analysis of future systems (multi-modal RAG, agent memory, and multi-agent systems), and the paper now has **350+ citations**. I also produced the **first task-level map of memorization in LLM post-training** [ACL'24], showing how memorization **scales with model size** and that the scaling itself is task-dependent (22.3% for summarization vs. 0.15% for reading comprehension).

▷ RAG Privacy and Retrieval-Database Leakage [ACL'24].
▷ Memorization in LLM post-training [ACL'24].

Publications

35+ papers at top-tier ML/NLP venues (NeurIPS, ICML, ICLR, ACL, EMNLP, NAACL, KDD, CVPR), including **12 first-authored** publications. **1400+ citations** (Google Scholar, Oct. 2026). Recognitions include a **Best Paper Award** (IEEE TCC) and **Best Paper Candidate** (ACL), **Spotlight** (ICLR), **Oral** presentations (ACL, NAACL), and adoption in frontier-model technical reports (Muse Spark, Qwen, Kimi). ** denotes equal contribution.*
